

# Financial Architecture of Asia ---India and china---

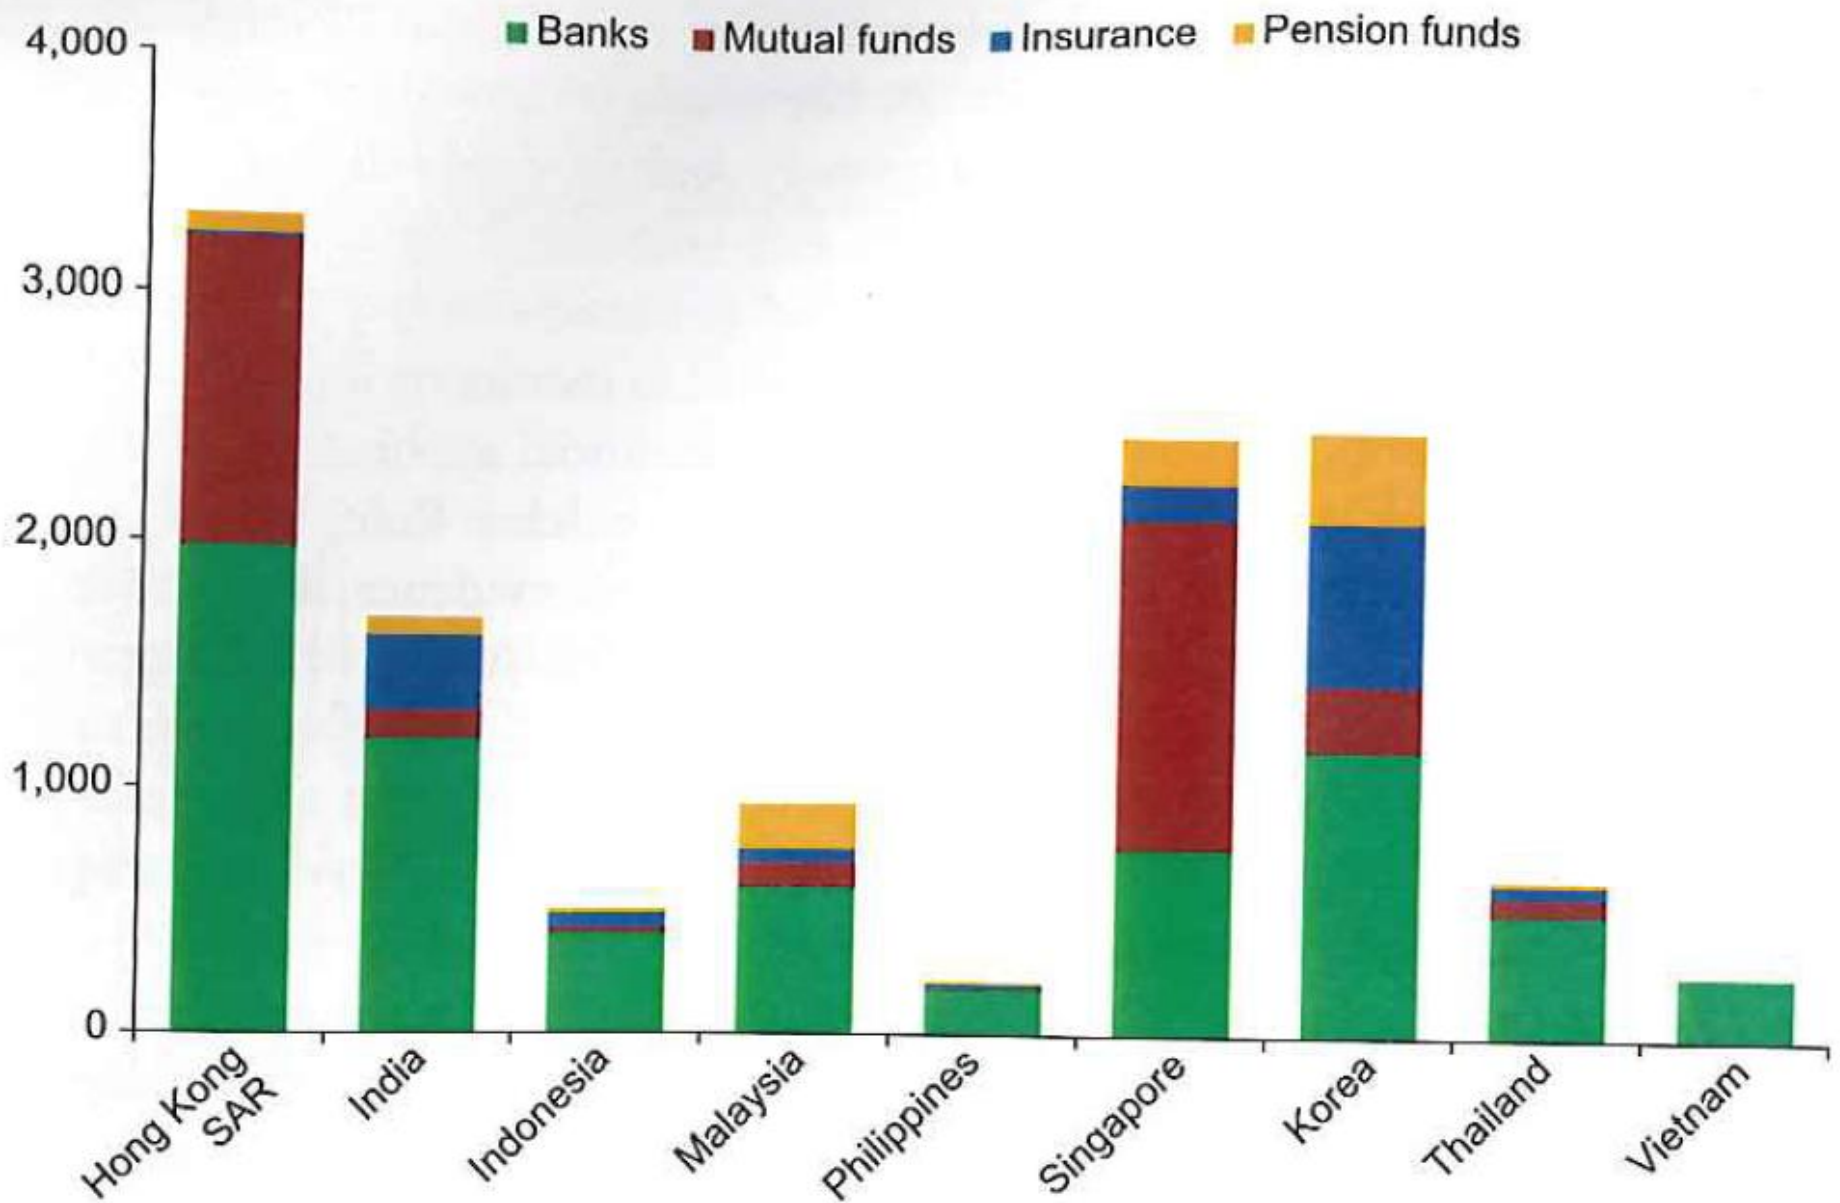

**Naoyuki Yoshino**

**Dean, Asian Development Bank Institute  
(ADBI)**

**Professor Emeritus Keio University  
[nyoshino@adbi.org](mailto:nyoshino@adbi.org)**

## 1. Assets of Financial Institutions

**Figure 4.6** A More Diverse Investor Base in Emerging Asia (*Domestic investor base, billions of U.S. dollars*)

# Characteristics of Financial Market

- 1, Bank based financial market**
- 2, Small share of institutional investors  
(Insurance and Pension funds)**  
→ **Lack of long term investors**
- 3, Access to finance is limited in certain countries**  
**Utilize post office and internet banking**
- 4, Money lenders charge very high interest rate**
- 5, Small share of mutual funds**
- 6, Lack of venture capital**
- 7, Huge Needs for Infrastructure Investment**

# **India's characteristic of Savings**

**Strong preference on gold and jeweleries**

**Domestic Savings → does not circulate**

**Lack of domestic investment**

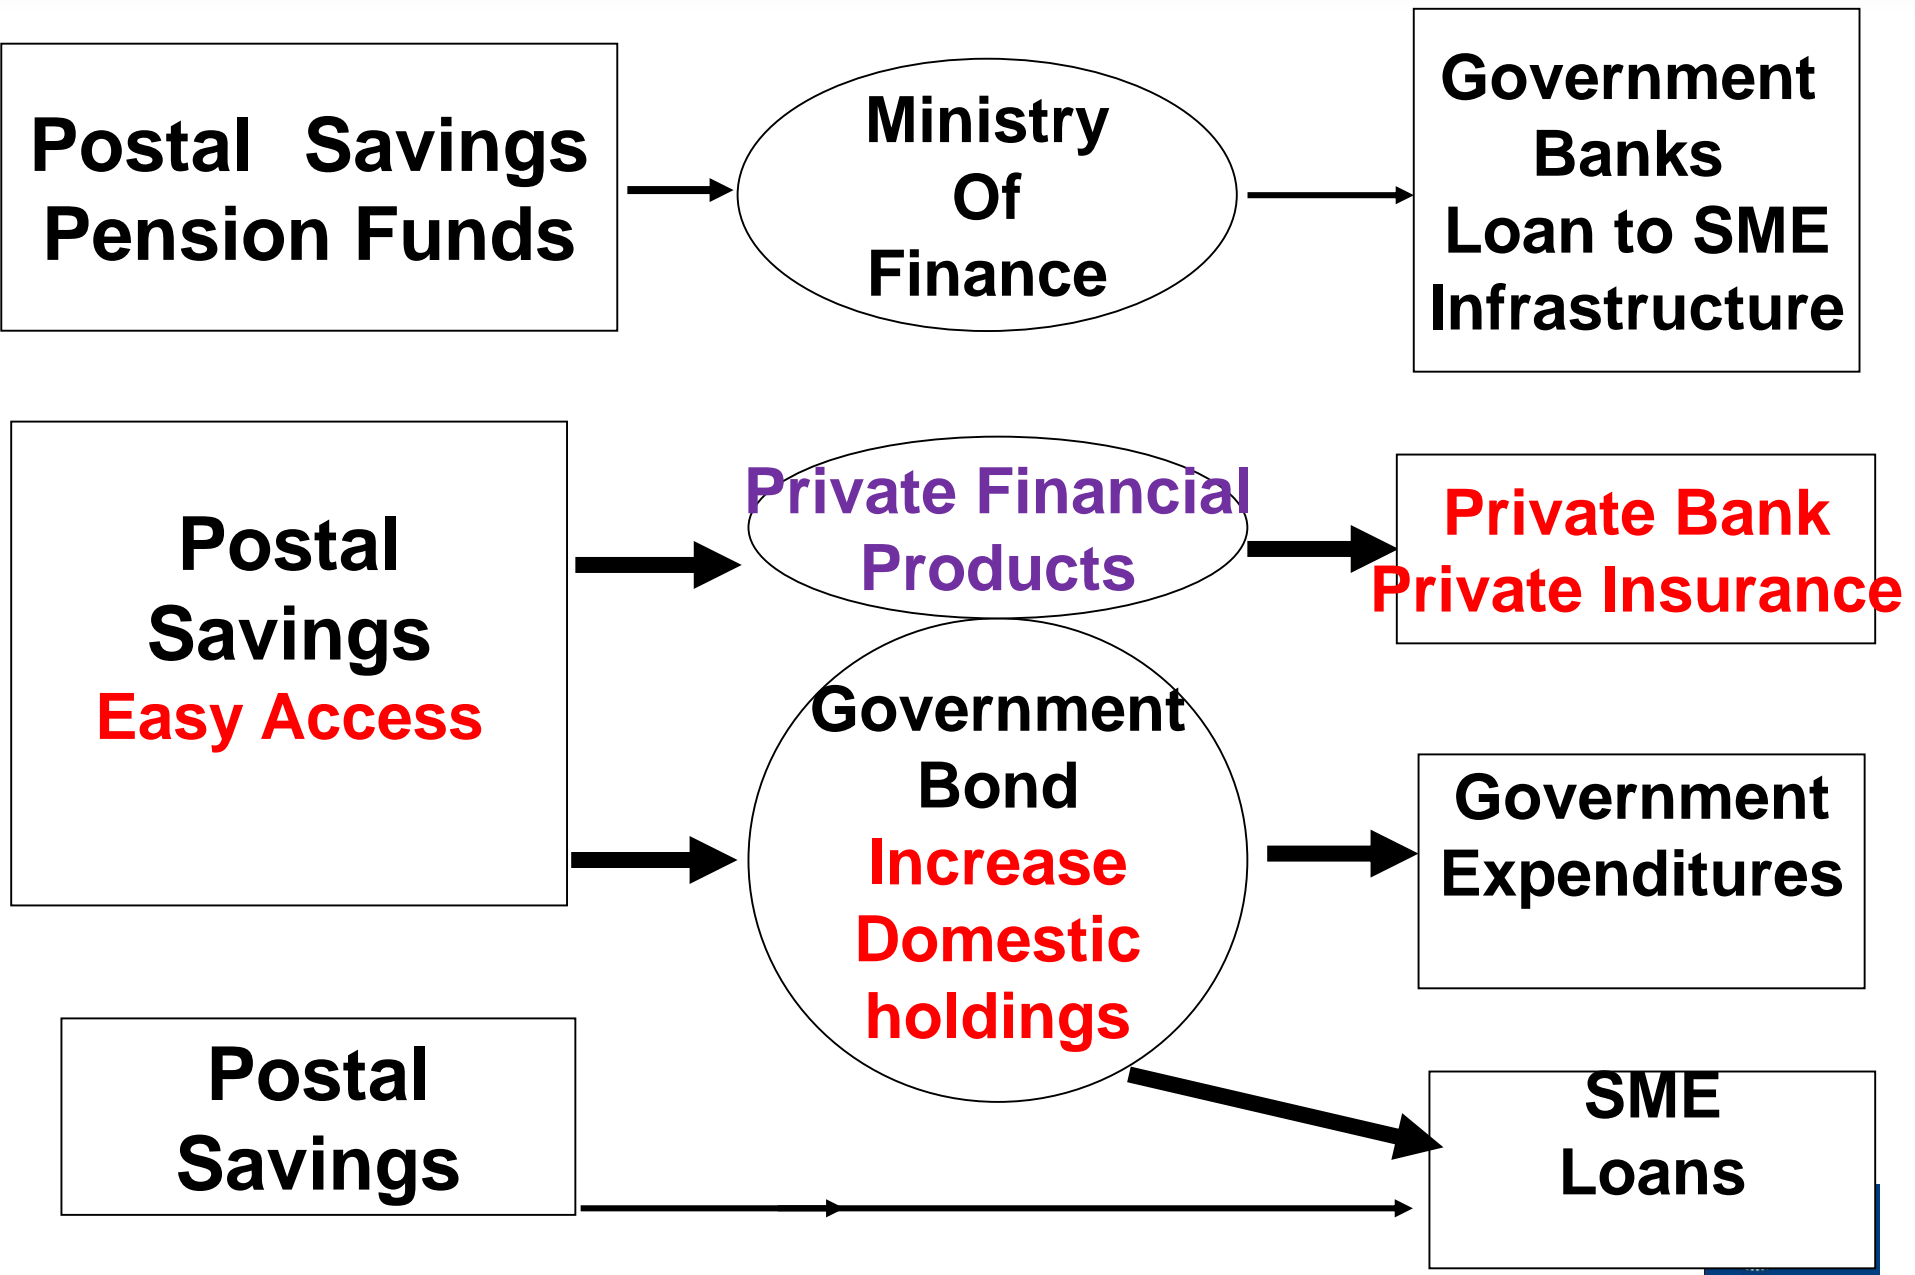

**Lack of finance for infrastructure investment**

**Financial Education for investment**

# **Chinese: Strong Preference of Stocks**

**Investments in real estate and stocks by individual investors**

# Financial Inclusion in India (Use of Post Office)

**Figure 2.12** Selected Economies: Mobile Banking Penetration (*Percent of respondents reporting mobile banking transactions in the last three months, 2012*)

# Financial Education in Schools

## **1, Primary School, Postal Savings by children**

**Each month students put some money,**

**At the end of the 6<sup>th</sup> year → huge amount**

## **2, Secondary School and High School**

**taught in the courses of “Civics, Home-economics”**

## **3, Financial education in Japan’s primary school**

**is taught at “Home making courses”.**

**Lack of expertise in school**

## **4, Retiree from financial institutions could teach**

**financial economics to students.**

**Video lectures**

# Financial Education Promotion Council

What kind of subjects and items should be taught at each level of school education ?

## Dynamic Transition of Exchange Rate Regime in China

*Naoyuki Yoshino, Sahoko Kaji, Tamon Asonuma\**

# Chinese Exchange Rate (RMB) Fluctuations

Sources: IMF IFS.

$$CNY_t = (b_{0,1} + \sum_{i=\{2,3,4\}} b_{0,i}D_i) + \sum_{j \in C} (b_{j,1} + \sum_{i=\{2,3,4\}} b_{j,i}D_i)X_{j,t} + u_t, \quad (1)$$

Table 1. Estimates of Weights on the US Dollar Rate

Sample period	Period 1 7 May 2003– 22 July 2005	Period 2 25 July 2005– 30 June 2008	Period 3 1 July 2008– 28 May 2010	Period 4 1 June 2010– 1 June 2012
Estimated weights on the US dollar rate	0.999** (0.001)	0.842** (0.036)	0.918** (0.017)	0.819** (0.039)

$$CNY_t = (b_{0,1} + \sum_{i=\{2,3,4\}} b_{0,i} D_i) + \sum_{j \in C} (b_{j,1} + \sum_{i=\{2,3,4\}} b_{j,i} D_i) X_{j,t} + u_t, \quad (1)$$

Table 1. Estimates of Weights on the US Dollar Rate

	Period 1	Period 2	Period 3	Period 4
Sample period	7 May 2003– 22 July 2005	25 July 2005– 30 June 2008	1 July 2008– 28 May 2010	1 June 2010– 1 June 2012
Estimated weights on the US dollar rate	0.999** (0.001)	0.842** (0.036)	0.918** (0.017)	0.819** (0.039)

Figure 3. Five Policies to Follow in the Transition to Stable Regimes

# Quantitative analysis

- Cumulative losses :  $T_0=0$ ,  $T_1=18$ , &  $T_2=18$

$$L(T_1, T_2) \equiv \sum_{t=1}^{T_0+T_1+T_2} \beta^{t-1} (y_t - \bar{y}')^2$$

Table 8. Cumulative Losses and Optimal Values of Instruments

	Policy (1) Dollar peg	Policy (2) Basket peg	Policy (3) Basket peg	Policy (4) Floating	Policy (5) <sup>b</sup> Managed floating
Stable regime					
Adjustment	—	Gradual	Sudden	Sudden	Sudden
Instrument value	$i^* = 4.34$	$v^* = 0.58$	$v^{**} = 0.68$	$m^* = 0.016$	$m^{**} = 0.017$
Cumulative loss (value)	17.04	1.80	1.91	2.67	2.31
Cumulative loss (percent of $(\bar{y}^2)^a$ )	23.4	2.4	2.6	3.7	3.2

Source: Authors' calculations

Note: <sup>a</sup>We calculate the value of  $\bar{y}^2$  shown in Section IV and obtain  $\bar{y}^2 = 72.8$ . <sup>b</sup>For  $T = 7$ , the cumulative loss is 3.54 ( $m^{**} = 0.017$ ).

# *Policy Implications*

**1, For a country like China, gradually adjusting to a basket peg regime is superior to the other proposed transition policies.**

- Advantage : it can minimize the negative influence of both interest rates and exchange rates on output

**2, A sudden shift to a basket peg is the second best solution, and is superior to a sudden shift to floating.**

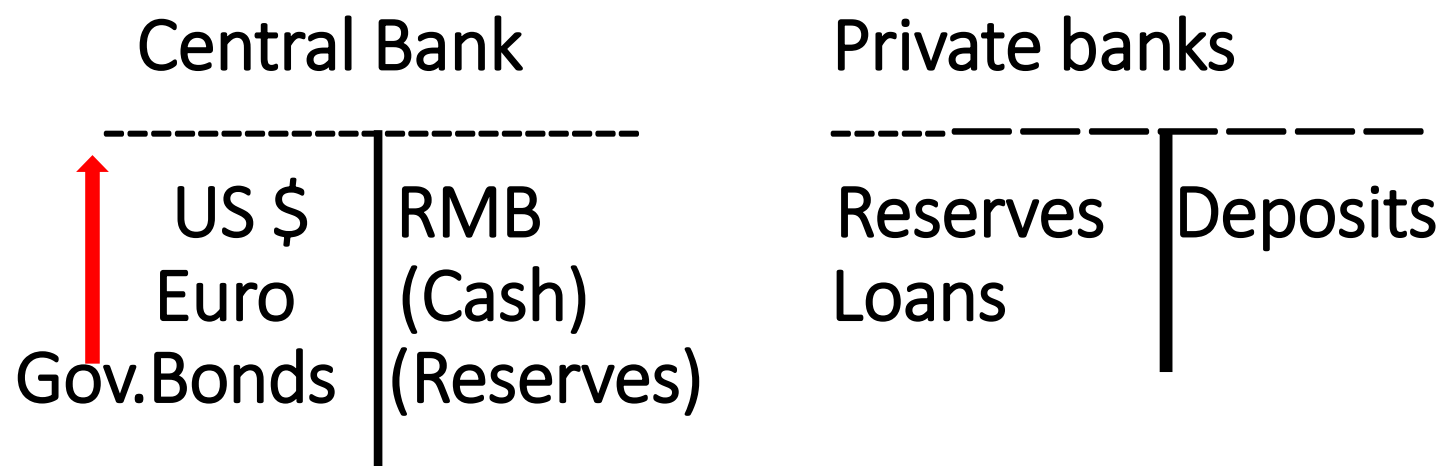

- Drawback : a lack of control over the negative influence of interest rates and exchange rates during the shift.

- Advantage : it can still assign optimal weights to currencies to stabilize output fluctuations once it has adopted a basket peg regime.

# 1 Chinese Exchange Rate (RMB)

Dollar Peg → Imbalance in Current Account  
Stability of Employment

## 2, Bubble

Bank loans to real estate and housing

# CHINA GDP, Bank Loan, and Real estate Loan

# RMB Money Supply in China and Exchange Rate

**1, Export driven recovery**

**depreciation of RMB**

**2, Domestic Demand lead recovery**

**middle income class → Consumption**

**3, Local government relies on property tax**

**higher real estate prices are welcome**

**4, Shanghai stock crush**

**Professional investors left the market**

**Individual investors kept on putting money**

**stock price keeping operation**

# Case Study: Southern Tagalog Arterial Road (STAR) , Philippines

- The Southern Tagalog Arterial Road (STAR) project in Batangas province, Philippines (south of Metro Manila) is a modified Built-Operate-Transfer (BOT) project.
- The 41.9 km STAR tollway was built to improve road linkage between Metro Manila and Batangas City, provide easy access to the Batangas International Port, and thereby accelerate industrial development in Batangas and nearby provinces.

# Method: Difference-in-Difference (DiD) Analysis

$$\text{Outcome} = \alpha + \beta_0 D + \sum_{t=-4}^{t+2} \beta_1 D \times T + \varepsilon$$

where:  $D = 1$  (Treatment group)  
 $D = 0$  (Control group)

$T = \text{Treatment period}$

**Assumption:**

Equal trends  
between Treatment  
and Control groups

**Note:** Treatment2 = Time Dummy {1991-2003} x Group2. etc. t-values are in parenthesis. Legend: \* p<.1; \*\* p<.05; \*\*\* p<.01. Clustering standard errors are used, allowing for heteroscedasticity and arbitrary autocorrelation within a prefecture, but treating the errors as uncorrelated across prefectures

# Expected rates of return on project bonds vs. benchmark yield

	No Efforts		Efforts to improve	
No Efforts	(50, $r$ ) Operating Company	Investors	(50, $\alpha r$ ) Operating Company	Investors
Efforts to improve	(100, $r$ ) Operating Company	Investors	(100, $\alpha r$ ) Operating Company	Investors

# *Risks Associated with Infrastructure*

## 1、**Risk sharing between private and public**

Various Risks (political risk, operational risk, demand risk, ex-post risk, maintenance risk, earthquakes, natural disaster risk)

## 2、**too much reliance on overseas' money**

→ future burden for the country

→ Increase domestic savings

## 3, **bankable projects or not ?**

## 4, **long term investment**

# Access to Finance by **SMEs** and Large Firms in Japan

# Barriers for SMEs in Accessing Financial Institutions

**A. People's Republic of China**

**B. India**

**C. Republic of Korea**

**D. Malaysia**

**Source:** ADB–OECD study on enhancing financial accessibility for SMEs: Lessons from recent crises  
Mandaluyong City, Philippines: Asian Development Bank, 2013

# Examined Variable

No.	Symbol	Definition	Category
1	Equity_TL	Equity (book value)/total liabilities	Leverage
2	TL_Tassets	Total liabilities/total assets	
3	Cash_Tassets	Cash/total assets	Liquidity
4	WoC_Tassets	Working capital/total assets	
5	Cash_Sales	Cash/net sales	
6	EBIT_Sales	Ebit/sales	Profitability
7	Rinc_Tassets	Retained earnings/total assets	
8	Ninc_Sales	Net income/sales	
9	EBIT_IE	Ebit/interest expenses	Coverage
10	AP_Sales	Account payable/sales	Activity
11	AR_TL	Account receivable/total liabilities	

*Note:* Retained earnings = the percentage of net earnings not paid out as dividends, but retained by the company to be reinvested in its core business or to pay debt. It is recorded under shareholders' equity in the balance sheet. Ebit = earnings before interest and taxes. Account payable = an accounting entry that represents an entity's obligation to pay off a short-term debt to its creditors. The accounts payable entry is found on a balance sheet under current liabilities. Account receivable = money owed by customers (individuals or corporations) to another entity in exchange for goods or services that have been delivered or used, but not yet paid for. Receivables usually come in the form of operating lines of credit and are usually due within a relatively short time period, ranging from a few days to a year.

# Cluster analysis: the average linkage method

## Dendrogram Using Average Linkage

# Factor Loadings of Financial Variables after Direct Oblimin Rotation

Variables (Financial Ratios)	Component			
	Z1	Z2	Z3	Z4
Equity_TL	0.009	0.068	0.113	<b>0.705</b>
TL_Tassets	-0.032	<b>-0.878</b>	0.069	-0.034
Cash_Tassets	-0.034	-0.061	<b>0.811</b>	0.098
WoC_Tassets	-0.05	<b>0.762</b>	0.044	0.179
Cash_Sales	<b>-0.937</b>	0.021	0.083	0.009
EBIT_Sales	<b>0.962</b>	0.008	0.024	-0.004
Rinc_Tassets	0.014	<b>0.877</b>	0.015	-0.178
Ninc_Sales	<b>0.971</b>	-0.012	0.015	0.014
EBIT_IE	0.035	0.045	<b>0.766</b>	-0.098
AP_Sales	<b>-0.731</b>	-0.017	-0.037	-0.016
AR_TL	0.009	-0.041	-0.104	<b>0.725</b>

Note: The extraction method was principal component analysis, The rotation method was direct oblimin with Kaiser normalization.
